

FIELD COORDINATION APP

Situational awareness

Live data feeds

Task management

Tactical whiteboarding

Multimedia support

Reporting

GINA Mobile is a powerful situational awareness application that improves field staff coordination. Thanks to support of secure team communication GINA Mobile is an ultimate tool to achieve assigned tasks. With mapping features and tactical whiteboarding directly in the map, it provides commanders situational awareness and enables managing special operations that require advanced collaborative tools.

GINA Mobile supports videostreaming and allows users to access CCTV and body-worn camera streams. This keeps commanders well informed and reduces voice communication to essential orders.

GINA Mobile works perfectly with GINA Central tactical AVL system. On request it can be integrated with various external CAD and case management systems to provide seamless communication between field units and emergency operating centre operators.

FEATURES

COORDINATION

- » Tactical whiteboarding
- » Points of interest
