

GINA Tablet

Emergency response application that streamlines the efficiency of field operations.

Effective coordination

GINA Tablet is an application for emergency vehicles specifically designed for firefighters, emergency medical services, and other security agencies. It can be easily integrated with any operational or dispatch system and provides all responding units with critical information for effective incident management and coordination.

Enhanced Responses

The app significantly improves response efficiency, reduces response times, offers real-time support, and strengthens collaboration among all units. With specialized navigation for emergency services, it is a reliable tool for faster and safer responses during emergencies.

Incident information

Displays urgency, address, and other information on the event page.

Emergency navigation

Provides emergency navigation directly within the app for quick and safe arrival.

Archive

Clear event records for retrospective incident analysis.

Common operational picture

Display cooperating units and other points of interest on the map.

Seamless communication

Communication with the dispatcher and units, including multimedia sharing.

Databases

Access to methodologies, procedures, and databases such as HAZMAT.
